Medan, Indonesia

EDUCATION

Bachelor of Informatics Engineering

STMIK IBBI MEDAN 2015 – 2019

SELECTED PROJECT

- **Internal & Public Web Applications –**
React.js / Next.js, TypeScript, Zustand, React Query
- **Internal Mobile Application –** Flutter, Provider, Camera Integration, Barcode/QR Scanner.
- **Internal Retail & Marketing System –**
ReactJS, TypeScript, Sales Data Recording, Odoo ERP Integration, Redux, React Hooks
- **Job Marketplace Mobile App (Kerjaloka)**
— Android Native (Kotlin), MVVM Architecture, Play Store Deployment
- **Mobile E2E Automation –** Maestro-based automation covering 300+ test journeys across multiple business workflows.

LANGUAGE

- Indonesia
- English

ABOUT ME

Frontend & Mobile Engineer with experience building internal systems and public-facing applications using React.js, Next.js, Flutter, and Android Native (Kotlin). I specialize in state management and frontend architecture, leveraging Zustand, React Query, Redux, Provider, and MVVM patterns to build scalable, maintainable, and performance-oriented applications. I am comfortable working on end-to-end feature delivery—from translating business requirements into technical solutions, to ensuring production readiness through clean architecture, optimized data flow, and close collaboration with product and backend teams.

EXPERIENCE

Taiwan Mobile — QA Automation

March 2026 – September 2026 | Remote

- Developed and maintained mobile and web E2E automation using Maestro, Maestro Hierarchy, and Playwright, including test flow development, UI inspection, debugging, and regression testing.
- Built Claude Agent Skills to support and standardize AI-assisted QA automation workflows, including test analysis, automation development, debugging, and reporting.

PT Propadu Konair Tarahubun — Frontend & Mobile Engineer

January 2025 – January 2026 | Medan

- Developed internal business systems and public-facing web applications using React.js / Next.js (TypeScript) with Zustand for client-side state management and React Query for server-state handling.
- Built internal mobile applications using Flutter with Provider / ChangeNotifier, focusing on scalable architecture, consistent state flow, and long-term maintainability.

PT Taqnia Utama — Frontend Web Engineer

January 2022 – December 2024 | Simalungun

- Developed enterprise web applications using React.js + TypeScript, implementing structured state management with React Query and UI state patterns.
- Designed scalable frontend architecture (reusable components, service layer, separation of concerns) to ensure performance, stability, and maintainability in production.

PT Cipta Kerja Arunika Nusantara — Mobile Application Developer

January 2019 – December 2021 | Medan

- Built Android native applications using Kotlin with MVVM architecture, managing UI state using ViewModel + LiveData.
- Handled asynchronous operations using Kotlin Coroutines and ensured application stability through deployment to Google Play Store.

EXPERTISE

- Frontend & Mobile Development
- State Management & Data Layer (Redux, Zustand, React Query)
- Cross-Platform Mobile Development (Flutter, React Native)
- Maestro, Maestro Hierarchy, Playwright
- React.js, TypeScript & Next.js Architecture
- AI-Assisted QA
